ASP.NET, .NET, AWS, Angular

Client
US company

01

DESCRIPTION

Identity Protection Service (IPS) that examines four of the more active sites to determine what type and how much of your personal information is available. Based on this, the service find will assign you a privacy risk profile, and advise how you can better protect yourself if necessary.

BUSINESS PROBLEM

Personal information is available online. Under the law everyone has a right to dispose personal data. However, the problem is to delete personal information from the Internet on behalf of the user.

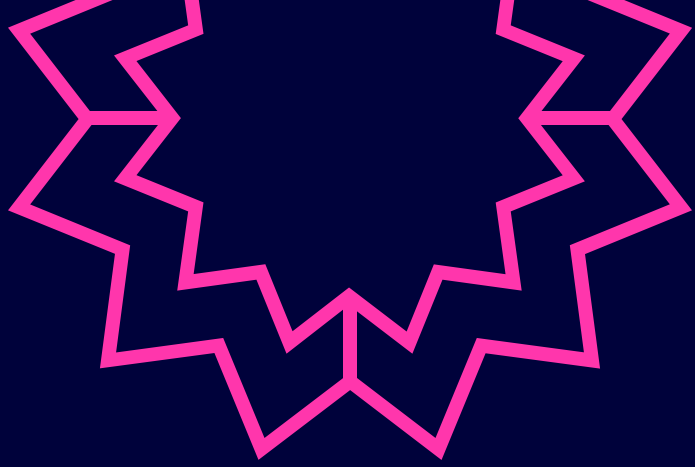

SOLUTION

Artificial intelligence, which constantly monitors and removes personal information on behalf of the user.

03

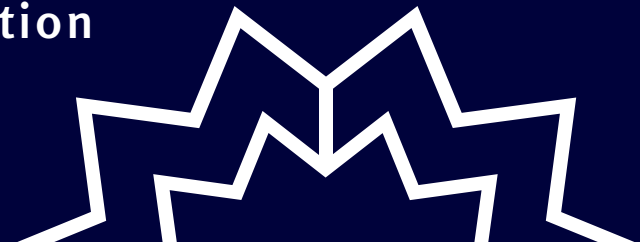

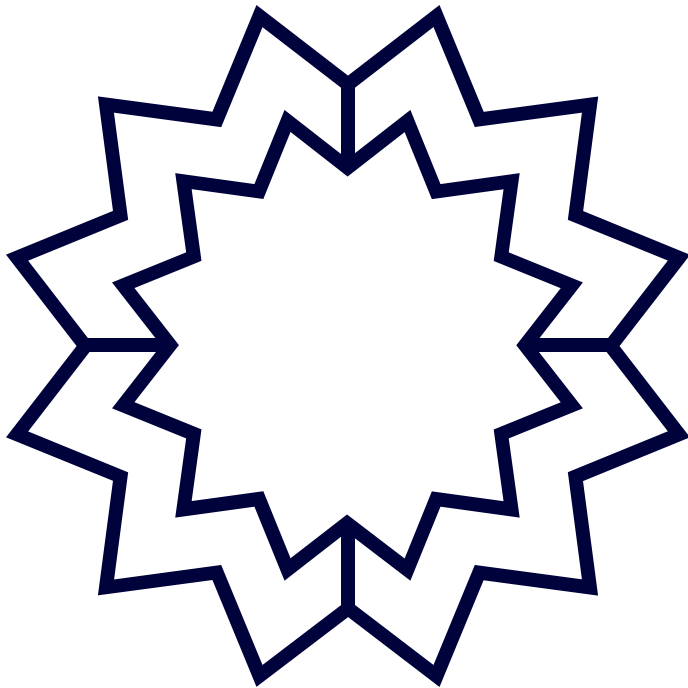

04

WORKFLOW

DETECT

IPS determines how much of your personal information is available and who is selling it.

REMOVE

The Service manages the removal of your personal information from unauthorized sites.

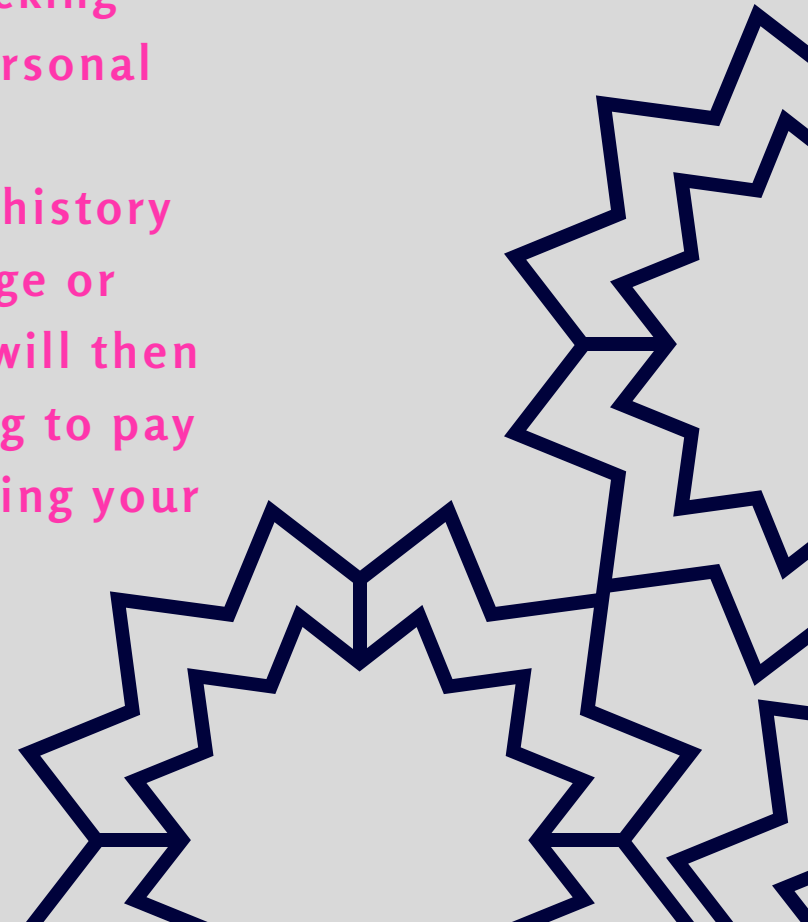

PROTECT

IPS continuously monitors and removes your personal information as it inevitably reappears.

WHY SHOULD YOU USE THIS SERVICE?

YOU CAN BE AT RISK

Every time you engage in any form of on-line activity, one or more entities are tracking your behavior and compiling your personal information: addresses, interests, preferences, relationships, financial history and more – all without your knowledge or consent. These information brokers will then sell you information to anyone willing to pay – invading your privacy and threatening your physical and financial security.

WHY YOU SHOULD USE THIS SERVICE?

THE SERVICE MITIGATE THAT RISK

The service empower you to regain control of this process, effectively manage your on-line presence and, most importantly, control the amount and type of your personal information that is being compiled and sold on a routine basis.
